

The University of Alberta

REPORT OF THE UNIVERSITY LIBRARIAN
TO THE PRESIDENT

For the Period

April 1, 1961 to March 31, 1962.

REPORT OF THE UNIVERSITY LIBRARIAN

1961-62

Caught in the upward spiral of student enrolment and expanding graduate programs, university library statistics could only move in one direction, and that was up. On the Edmonton campus in the year under review, attendance in libraries increased by 15%, while the number of books circulated for home use was up by 22%. These increases are in sharp contrast to the levelling-off trend in last year's report. The total number of books circulated was 381,087. The Calgary library for the second year in succession recorded increases in attendance and circulation of 82% and 63% respectively. The circulation figure was 71,176.

While students studied and read library books, the library collections grew apace with about 700 books being added each week to the Edmonton collections. The rate of acceleration of acquisition programs on the two campuses was as follows: in Edmonton book expenditure was up by a third and number of accessioned volumes by two-fifths. In Calgary expenditure and volumes more than doubled in the year. The book fund in Edmonton was \$210,000; in Calgary, with gifts, it was approximately \$100,000. In any mention of a library's book or periodical funds cognizance must be taken of the steady rise in prices, and at the same time the devaluation of the Canadian dollar. In the year under review, since most of our books were imported into Canada, the devaluation lost the library several thousand dollars; the new pegged dollar rate will cost the Edmonton library about \$15,000 in book purchasing power in 1962-63.

In Edmonton in 1961-62 the Library added 34,739 accessioned volumes, 20,120 government documents, 450 reels of microfilm, 1500 micro-cards, 5000 microprint sheets, 3 phono-records, 2 motion pictures, and 1532 miscellaneous issues of medical journals received free through the Medical exchange. In periodical subscriptions, too, the library's holdings grew; the number of subscriptions placed increased by 28%. Between paid and gratis subscriptions, the library is now in receipt of 3555 periodical titles.

The statistics above relative to the 586 titles of various micro-materials fail to indicate the importance of this material in quantity of printed information contained or in bibliographic treasures otherwise not available to scholars working in our library. An important micro-acquisition was Selected rolls from the records of the German Foreign Ministry and Reich Chancellery covering the Weimar period. An annual subscription was placed to a microfilming program which will in time make available to our library all books published between the years 1475 and 1700 in the British isles, or English books published abroad. This continuing project proposes to film all available titles in Pollard and Redgrave's Short-title catalogue... and Wing's Supplement. Some day it may be possible, as is being done at the University of New Brunswick, to build programs of graduate study in several disciplines around this one collection of microfilm.

The Library in its acquisitions added many titles worthy of special mention, but from many are selected a few. Two important sets added were Encyclopædia italiana di scienze, lettere ed arti and Thieme-Becker's Allgemeines Lexikon der bildenden Künstler. In literature the library acquired first editions of three of Dickens' works, in parts as originally issued. The books were Master Humphrey's clock, Our mutual friend, and the Pickwick papers. Our most notable purchase was a library of first editions by, and works about, the English writer D. H. Lawrence; the acquisition of this library, formerly the property of Sir David Eccles, currently British Minister of Education, makes us the repository of one of the best Lawrence collections in Canada. More photostats of original material relating to the English poet, William Wordsworth, were sent from Dove Cottage for deposit in our library.

At the year's end the Edmonton libraries contained 266,357 accessioned volumes, an increasing library of micromaterials, and a growing collection of government documents.

Of micromaterials the Library's holdings are 9800 microtexts, 9658 microcards, and 2695 reels of microfilm. Perhaps the significance of our holdings may be made more graphic by the reminder that one sheet of microtext may contain a book, one microcard an issue of a journal, and one reel of microfilm a month of the thickest of newspapers, the New York Times.

The Calgary library added 12,060 volumes in 1961-62, an increase in acquisitions of 128%. This library subscribed to 295 additional periodicals to bring the total of subscriptions to 967 titles. The library collection has now 42,000 volumes, and is still a weak collection for the teaching program it is being called upon to support.

Of Space and Time

The rapid growth of the book collections caused book storage problems, particularly on the Edmonton campus. In the Rutherford Library additional shelving was crowded onto the stack tiers and into reading rooms. All seminar rooms on the top floor, except the two occupied by the Boreal Institute, were taken over as storage areas. While these emergency measures greatly increased the book capacity of the Rutherford Library, they seriously inconvenienced readers and library staff alike.

Others changes in space allocation in the Rutherford Library were to move the Order Department to the former Art Gallery, while the latter was squeezed into the Music Listening Room in an uneasy clash of color and sound. The map room was moved to Seminar Room 311. The Rare Book Room ceased to exist as it was needed for office space by the Periodicals Section. Rare books and Canadiana cases were crowded into the Reference Reading Room.

The Library experimented with longer hours during the year with three areas of the library open evenings during the inter-session period of May and June. The few users did not warrant continuing the experiment after the end of Summer Session. In January the opening of the Reserve Reading Room until 11:00 p.m. each week day for study purposes was justified by attendance. In February the Education Reserve Room was open in the evenings to accommodate the overflow of students studying in the main Education reading room.

Staff

On the Edmonton campus the increase in the work load averaged about 22% in public service departments and approximately 40% in the processing departments, and to cope with this fifteen persons were added to the staff. This represented a staff increase of 20%. The usual turnover of non-professional staff plagued the library, so that at the year's end 60% of this category of employee had less than ten months of service.

The following professional librarians were added to the Edmonton staff: Miss Margaret Auxier, Mr. Peter Hanlon, Mrs. Mary Ann King, Miss Frances Mielke, Miss Phyllis Morgan, Mr. Daniel Reicher, and Mrs. June Thomson. In Calgary two professionals were added to the staff, Miss Flora Macleod and Mr. Philip Rees. Unfortunately, the Library was unable to fill one vital position in the Calgary processing department, and in consequence the department was under strain all year.

Resignations from the professional staff were: Mrs. Stephanie Zmurkevych from Edmonton and Mr. Dimitri Kehaya from Calgary.

In May several members of the staff attended the Alberta Library Association Conference held in Lethbridge. Three members of the staff, Miss Dorothy Hamilton, Mr. Donald Baird and Mr. Sidney Harland, attended the Canadian Library Association Conference. The Law Librarian, Mr. Denys Noden, in June attended a Conference of American Law Librarians in Boston. The Medical Librarian, Miss Russell, was enrolled in a course in medical librarianship and bibliography at Columbia University during Summer School. In February she attended the first conference of Canadian medical librarians which had as its purpose to study the possibility of greater co-operation between medical libraries. The Chief Librarian attended a National Research Council sponsored conference on the problems connected with the dissemination of scientific information.

Library Committee and Sub-Committee

The Library Sub-Committee met eight times during the year to advise the Librarian on various problems, the most important of which was the allocation of money to teaching departments for book purchases. During the absence of Dr. Cragg, the committee was under the chairmanship of a former member of the Committee, Dr. Rawlinson. One meeting of the Library Committee was held.

Library Administration

Throughout the year the Librarian and the two Assistant Librarians continued to be heavily involved in library planning, to which there would seem to be no end. The library buildings are, of course, the Research Library, the Education Building's library wing, and the Calgary campus library. Structural plans and furniture lay-outs for the Education Library were completed. For the Research Library the floor plans were completed and the exterior design was approved. In connection with planning, the Librarian visited our building consultant, Dr. Keyes D. Metcalf, in Boston in June, and participated in a Library Planning Institute held at Kent State University in July.

In the area of administration an important beginning was made in the codification of library procedures and regulations. Where once it was sufficient to communicate these orally, with the increasing complexity of our organization it has become necessary to spell out administrative rulings for the guidance of our growing and changing staff.

The library administration assumed responsibility for accounts, and for the ordering and internal distribution of supplies and equipment, tasks formerly under the Book Order Department.

Order Department

Miss Lilian Leversedge, Order Librarian, reports the year as one of readjustments made necessary by the transfer of responsibilities listed above to the Library Administration, and of the transfer of ordering and recording of periodicals to the Periodicals Section. The purpose of this library reorganization was to enable the Order Department to concentrate on book acquisitions.

The department ordered 20,576 titles during the year, an increase in title ordering of 28%. The department received through purchase 30,739 volumes which with books received as gifts totalled 32,138 volumes, representing an increase of 41%. The Order Librarian points out that standing orders for sets and series is now a commitment of \$16,000 per year, which sum was the whole book budget sixteen years ago. The backlog of out-of-print desiderata increased during the year though second-hand catalogues were constantly checked, wanted items advertised, and search lists sent to dealers.

A new system of keeping accounts of departmental expenditure was initiated. The purchase by the department of national and subject bibliographies reflects the expanding scope, geographical and topical, of the library's collection. The Order Librarian concludes her report by emphasizing the importance of a well-planned acquisitions program.

Cataloguing Department

Mr. Daniel Reicher assumed administrative responsibility for the Cataloguing Department on September 1st, and has maintained the department's work output at a high level. The trend toward mechanization was continued with installation of a off-set printing machine and by more intensive use of electric typewriters. The clerical staff of the department produced 140,152 cards, in whole or in part. To indicate the rate at which the card file of the library's holding is growing, between four and five hundred cards are filed each work morning in the Main Catalogue.

An introductory paragraph in this report contains a statement of the quantities of books and micromaterials acquired by the Library; the cataloguing and classification of these materials to make them accessible to readers constitutes most of the work record of the Cataloguing Department. An extra task in which the department was involved during much of the summer was the alteration of catalogue records of materials transferred from the Rutherford Library to the Physical Sciences Library.

Periodicals Section

The importance of periodicals and serials, especially in university and technical libraries, has increased immeasurably since World War II. Anticipating a rapid growth in the Library's holdings of periodicals, a Periodicals Section was set up last August with the responsibility of processing requests for current subscriptions to, and back files of, periodicals, and of maintaining a centralized record of all periodicals in the library system. Mrs. June Thomson was appointed Periodicals Librarian and is succeeding in bringing our periodical holdings under bibliographic control.

As indicated earlier in this report, the Library now regularly receives 3555 current periodicals. Of this number, 851 are free subscriptions. The number of journals first received by the Library in 1961-62 was 742.

Not only is the Library under pressure to subscribe to more journals, but an increasing number of requests are received asking for purchase of early files to complete runs of frequently consulted journals. The Periodicals Section did little back-order work until the end of the year, but in future this will be an important part of the work.

The Periodicals Section is also responsible for the supervision of the Periodical Reading Room and the circulation of the journals therein. Statistics show the attendance to have been 18,377, an increase of 9%, and circulation to have been 37,060, an increase of 28%.

Binding Preparations Unit

Mr. Alan Rankin operated the Library's Binding Preparations Unit under the supervision of Mr. Baird, Assistant Librarian. During the year 6,462 volumes were sent out for binding, an increase of 45%; the breakdown by type of material was 1712 books, 2236 older journals, 1516 current journals, and 996 checkbinds. In addition, 346 volumes were pambound or repaired in the Library. The volumes to be bound were sent to four local commercial binderies, as well as to the University Printing Department. Binding prices in Edmonton, which average \$6.25 per periodical volume, continue to be excessive, but it is hoped that the introduction of mechanization by one bindery will bring prices down.

Reference Department

The statistical report of this department shows a notable increase in all aspects of the work. In the 8850 reference questions asked the staff, there was a significant increase in the number of long and involved questions, mostly posed by teaching staff, which were successfully answered. Substantial increases were recorded in the numbers of books, pamphlets, theses, maps, documents, and micromaterials borrowed or consulted. More people used microfilm and microcard readers, and the Thermofax reader-printer continued to be popular with persons wanting to enlarge to full-sized pages frames of microfilm.

In a general reorganization within the Library, the Reference staff was freed of responsibility for the operation of the Periodical Reading Room and of the Bindery Unit, thus, for the first time in some years, making available professional librarians to staff the reference desk during all hours open, with the exception of three evenings of the week.

Since our library collection is small for our ambitious graduate and research programs, and since our university is so far from major library collections, Inter-Library Loan Service is important to teaching staff. The number of requests which the reference staff tried to fill by borrowing has greatly increased in recent years, and in 1961-62 was up again by 27%. The number of requests from staff and students was 1611. Loans requested by other libraries was 816, almost double those of the previous year; the increased borrowing from our library reflects the rapidly growing strength of our collection.

The Reference Department still has responsibility for the Library's document collection. The department added 16,707 documents, an increase of 67%. The number of documents received from various agencies may be of interest: Dominion government, 6641; provincial, 2159; British, 616; U.S., 1427; other foreign, 1844; U.N., 3113; other international organizations, 906. A start was made on collecting an important series when the Library Sub-Committee approved the expenditure of \$2000 per annum for the purchase of volumes of the Congressional edition of United States publications for the period 1865-1900 as volumes come on the market. An increasing effort has been made to publicize and improve the informational service to students from our growing collection.

The department added 395 pamphlets, 659 maps, and became the repository of the 139 theses presented by candidates for advanced degrees at the University's spring and fall convocations.

Miss Shirley Mooney is to be commended for her successful operation of the Department during the absence of Miss Dorothy Hamilton the Chief Reference Librarian, who was on sick leave toward the end of the year.

General Circulation Department

The Circulation Department is in charge of the circulation of books from the Main stacks and from the Reserve Reading Room.

The Circulation Librarian, Miss Freifield, states that in her department the year has been hectic, and although the staff was augmented in numbers, it could not keep up with the flood of books being borrowed or returned. This is not strange since statistics show that circulation from the main circulation desk was up 23%, and from reserve, 15%. The figures of volumes circulated were 109,794 and 45,404 respectively. An analysis of work load by library department shows that of the total circulation in our library system, 29% is from the Main Circulation Desk, and 14% from the Reserve Desk.

During the summer of 1961 the Circulation Desk was one of three library areas open in the evening during May and June. As attendance did not warrant continuing this experiment, the library closed evenings after Summer Session. During Summer Session the circulation of books was 19,729 as compared with 16,056 the previous year. During the week of August 20-26th the Circulation and Reference Departments co-operated to provide library service for a UNESCO seminar held on the campus. The Department also sent out 514 volumes to extramural students during the year. The circulation of reserve books to students enrolled in evening classes on the Edmonton campus doubled although the enrolment remained the same.

Law Library

In this reading room attendance was up by 10% to 41,126. Circulation remained static at 12,067, but as most of the law books are used in the library higher attendance would suggest that more intensive use was being made of the collection.

The Law Librarian, Mr. Noden, notes that in the second year of expansion of the Law collection 2844 volumes were added as compared with 1919 the previous year. The library has long been deficient in United States material, but this has been greatly remedied this year. The most outstanding acquisition was the Pacific Reporter donated by the Law Class of '51. A second major effort was directed toward improving the Library's holdings in law reviews and periodicals. Finally, at the end of the year a considerable quantity of Quebec legal material was acquired.

Medical Sciences Reading Room

The Medical Sciences Library, Miss Phyllis Russell, reports the circulation to have been 37,628, an increase of 24%. It is significant that nearly a quarter of the circulation was to doctors on the staff and to medical practitioners, mostly in the City of Edmonton. A few books were mailed, and a number of photostats sent to practitioners scattered throughout the province.

The library staff completed the indexing of the Alberta Medical Bulletin. The periodical holdings in the medical and dental fields were carefully analyzed with a view to deciding which additional important journals should be in our collection. As a result, the Medical Library Committee recommended subscriptions to 322 additional journals of which 203 were approved for subscription by the Library Sub-Committee. The Library also added 29 additional dental journals. The library staff is assisting the Research Committee of the Faculty of Medicine to collect reprints of all journal articles by members of the faculty. Through the Medical Library Association Exchange some 1532 issues of journals were received free in order to round out our early files of medical periodicals.

Applied Science Reading Room

In this reading room, as was to be expected, the circulation statistics were affected by the transfer during the summer of chemical books and journals to the newly established Physical Sciences Reading Room. Thus, circulation was down by 15%, but attendance increased by 2%.

This reading room added to its collection some 3413 agricultural and engineering bulletins and 6568 manufacturing and engineering standards. The standards were among the notable acquisitions of the year, representing complete sets of the standards issued by the American Standards Association and the British Standards Institute.

Mrs. Emma MacDonald, the Applied Science Librarian, undertook general supervision of the service in the new Physical Sciences Reading Room.

Physical Sciences Reading Room

Following a Library Committee decision in April, the Library began to arrange for the transfer of journals and advanced texts in Chemistry, Mathematics, and Physics to the new library. Some 2795 individual book titles and 235 journal titles were transferred during the summer and fall. Mrs. Majorie Corah assumed charge of the new library and had it operating successfully during the winter term.

The total attendance was 29,114, while circulation from the reading room was 4381. The figure for circulation does not indicate the full use of the collection since the material is primarily for consultation within the library.

Education Library

An analysis of circulation figures within the library system on the Edmonton campus indicates that the Education Library is responsible for the circulation of 25% of the books. The percentage increases in the Education Library, both in attendance and circulation, were higher than in any other area. Attendance was 103,314, representing an increase of 22%, while circulation was 97,973, an increase of 34%. In her report Miss Moira English, the Education Librarian, cites among the factors responsible for the large increases the larger enrolment in Education, the steady growth of the book collection, and a greater number of assignments which necessitate wide reading by students.

Among activities of the staff were the following: many older books were removed from the shelves and stored in cartons to alleviate the shelf crowding; the lists of enterprise books used by student teachers were revised; in May a collection of books was sent to Banff for the 1961 Short Course in Educational Administration; in July another collection was sent to Concordia College for the Leadership Course for School Principals; in September seven collections of books were sent to outside towns for the use of the evening classes; some 300 books were transferred to the Rutherford Library for the use of the Educational Administration Division which had moved to the North Campus.

Miscellaneous Services

In the provision of library service to students in the Evening Credit Program, the Library sent small collections of basic books to each of the twelve centres outside Edmonton and Calgary where courses were given.

Photostatting services filled 371 requests for 3,852 pages of photostats.

The music listening program held over the noon hour during the winter session continued to attract a capacity audience, although this year the program operated under difficulties, since the room also served as a gallery for travelling art exhibits.

CALGARY LIBRARY

Miss Dorothy Ryder in her annual report on the development of the Calgary Library sets out the great increases in the use of the library. As indicated earlier, the attendance was 279,004, and the circulation of books was 71,176. These are increases over the 1960-61 figures of 82% and 63% respectively. The statistics for library materials added, like all other Calgary statistics, show a remarkable increase. These rapid developments necessitated an expansion into additional areas of the Arts-Education Building, and an increase in staff to almost double that of the previous year. Miss Ryder and her staff are to be commended for their success in adjusting the library operations to the rapidly changing program on the Calgary campus.

The planning of a new library building entailed numerous meetings and discussions during the year. The Calgary Library Planning Sub-Committee was chaired by Professor E. M. Dodd. Plans have been completed, except for some minor details, for a five-story library building of 110,000 square feet which is to be ready for occupancy by the fall of 1963.

The Library Committee, which is under the chairmanship of Dr. Hartland-Rowe, held twelve meetings during the year.

Staff

The library staff increased from twelve members at the beginning of the year to twenty-two at the end. The greatest staff increase was in the Processing Department. The Library experienced no difficulty in finding clerical help, but a shortage of professional librarians created an imbalance in the Processing Department which placed a heavy supervisory load on the professional staff. The department was short one cataloguer for seven months and was without an order librarian for four months.

Processing Department

Miss Elizabeth Skeith, the Processing Librarian, reports the number of books ordered and catalogued as 12,060. This compared with 5,301 volumes in 1960-61. Late in the year the Board of Governors made available a supplementary book budget, and as a result the department hired more staff and in consequence had to move into larger quarters which had formerly been occupied by the Book Store.

Serials Department

The number of new subscriptions to periodicals placed was 295 bringing the total number of current periodicals in the Library to 967. Of this latter number, 58 were complimentary or gift subscriptions.

The Library sent 1,237 volumes to be bound as compared with 908 the previous year.

Reference-Circulation Department

In July Miss Flora Macleod was appointed to take charge of public service. With the rapid growth in service this department has had to change its organizational procedures and equipment to meet the changing needs.

During the regular university session the Circulation Department was open an average of 76 3/4 hours per week.

A Summer Session was held in Calgary for the first time in 1961, but as all courses offered had been held during the regular session, the Library had a sufficient book stock to operate without undue pressure.

The number of Inter-Library Loans requested by teaching staff and graduate students was nearly five times greater than requests in 1960-61. The Library borrowed 395 volumes, and obtained photocopies for 31 requests. These figures do not include quite extensive borrowing of materials from the Rutherford Library on the Edmonton campus.

Gifts Received by the Library (Edmonton)

From the Steiner Foundation, 29 books on Rudolf Steiner

From the Alberta Tuberculosis Association, \$196.58

From the Canadian Cancer Society, Alberta Division, \$500.00

From Manley & Cawsey, Wetaskiwin, Dominion Law Reports, v.1-65

From the Law Graduates, Class of 1951, Pacific Reporter Series

From the Law Society of B.C., The Advocate, v.1-19

From the Manitoba Bar Association, Manitoba Bar News, v.1-33

From the General Electric Company, Scientific Papers of Irving Langmuir, 12v.

From the Consulate of Japan, four books on Japanese art and literature.

From the Canada Council, \$5,000.00 for Slavonic materials

From the Edmonton Academy of Medicine, \$150.00

From the Graduating Class of 1960, Bibliografia Hispanica, 1942-1957

and numerous others.

Gifts Received by the Library (Calgary)

From the Alumni Association, \$5,000.00 for books in political science

From the Alberta Society of Petroleum Geologists, all available publications
of the society

From Mr. J. E. A. McLeod, Dalhousie Review, v.1-41

and numerous others.
